

Activité Pratique N° 1 :

Développement d'un Web service SOAP, WSDL avec JAWRS

Présenté par : Khoumani Asmaa

Encadré par : Mr. Mohamed
YOUSSEFI

Introduction :

Dans ce TP on va créer un Web service SOAP, WSDL avec JAWRS

ENNONCE :

1. Créer un Web service qui permet de :

- Convertir un montant de l'auro en DH
- Consulter un Compte
- Consulter une Liste de comptes

2. Déployer le Web service avec un simple Serveur JaxWS

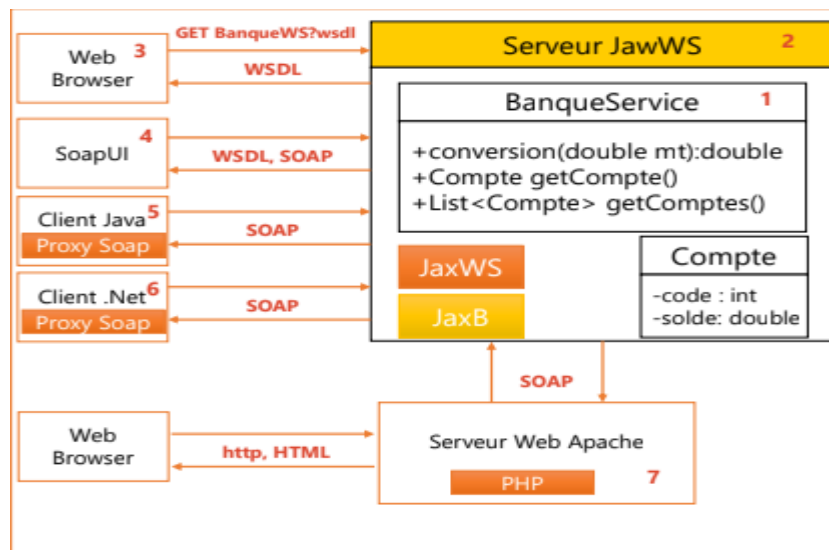

3. Consulter et analyser le WSDL avec un Browser HTTP

4. Tester les opérations du web service avec un outil comme SoapUI ou Oxygen

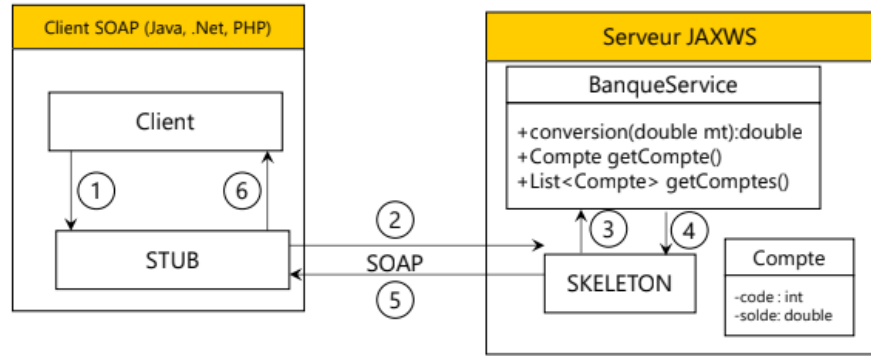

5. Créer un Client SOAP Java

6. Déployer le Web Service dans un Projet Spring Boot

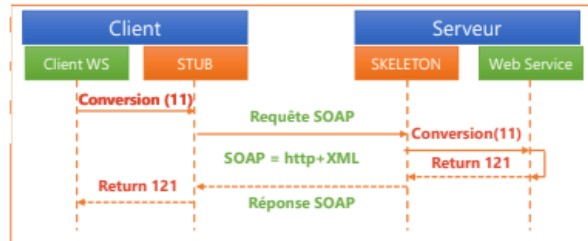

CONCEPTION ET ARCHITECTURE

Architecture 1

- 1 Le client demande au stub de faire appel à la méthode conversion(12)
- 2 Le Stub se connecte au Skeleton et lui envoie une requête SOAP
- 3 Le Skeleton fait appel à la méthode du web service
- 4 Le web service retourne le résultat au Skeleton
- 5 Le Skeleton envoie le résultat dans une la réponse SOAP au Stub
- 6 Le Stub fournit le résultat au client

Capture d'écran :

1. Créer un Web service qui permet de :

- Convertir un montant de l'auro en DH
- Consulter un Compte
- Consulter une Liste de comptes

2. Déployer le Web service avec un simple Serveur JaxWS

3. Consulter et analyser le WSDL avec un Browser HTTP

The screenshot shows an IDE window titled "WebService - ServerJWS.java". The code in the file is as follows:

```

1 import jakarta.xml.ws.Endpoint;
2 import ws.BanqueService;
3
4 public class ServerJWS {
5     public static void main(String[] args) {
6         Endpoint.publish(address: "http://0.0.0.0:9191/", new BanqueService());
7         System.out.println("web service déployé sur http://0.0.0.0:9191/");
8     }
9 }
10

```

The Run window at the bottom shows the output: "web service déployé sur http://0.0.0.0:9191/". The status bar at the bottom indicates "Build completed successfully in 13 sec, 730 ms (3 minutes ago)".

localhost:9191/BanqueWS?wsdl
